EDUCATION

Master of Data Science
2022 – 2024
University of Malaya (UM)

Bachelor of Science (Biotechnology)
2015 – 2018
Swinburne University of Technology Sarawak

WORK EXPERIENCE

Research Assistant (Internship) – Agriculture Research Centre Semenggok, ARC (Kuching, Sarawak)
June 2018 – Oct 2018

- **Managed the project "Genetic Variation of Durian (Durio zibethinus) Clones in Sarawak Assessed by Simple Sequence Repeat (SSR) Markers"**, aimed at collecting genetic data to verify and confirm the identity of durian varieties for future breeding programs.
- **Conducted DNA extraction** from nine distinct durian samples, ensuring high-quality genomic material for subsequent analysis.
- **Amplified genomic DNA** using nine different SSR primers, achieving successful PCR amplification with seven primers, which produced clear and reproducible bands.
- **Performed binary data matrix scoring for data analysis**, leading to the differentiation of eight out of the nine durian types, thereby providing valuable insights into the genetic diversity of durian clones.

VOLUNTEERING EXPERIENCE

Volunteer Sunday School Teacher
The Arch Church, Shah Alam, Selangor
(May 2022 – December 2023)

- Teach weekly lessons to children aged 3 to 8 years old, focusing on moral development and community values.
- Plan age-appropriate activities and manage classroom behavior
- Collaborate with other volunteers on weekly lesson and class activities

Volunteer Science Week Facilitator – Plant Tissue Culture Workshop
Sekolah Menengah Kebangsaan St. Teresa, Kuching, Sarawak
(July 2017)

- Led hands-on workshops for high school on the basics of plant tissue culture
- Explained complex scientific concepts in simple manner and helps to promote STEM interest among the youth

SKILLS

Microsoft Office
Microsoft Word 365: Advanced
Microsoft Power Point 365: Advanced
Microsoft Excel 365: Intermediate

Big Data Technologies
Apache HBase: Basic
Apache Hive: Basic

Data Analysis & Machine Learning
Microsoft Power BI: Basic
WEKA: Basic
SAS: Intermediate
Octave: Basic

Programming Languages
Python, R

Cloud Platform
Google Cloud Platform (GCP)

Languages
Malay: Advanced
English: Intermediate
Iban: Intermediate

PROJECT UNDERTAKEN

Stroke Prediction (R programming)

- Successfully developed machine learning model to predict risk of getting stroke with high accuracy.
- Created Shinny Apps to predict risk of getting stroke

Predicting Food Insecurity in ASEAN Countries (Python)

- Successfully developed machine learning model to predict food insecurity (FI) in ASEAN countries with high accuracy
- Analysed the impact of food insecurity in ASEAN countries

Global Economic Impact (GCP)

- Processed and analysed world bank data to enhance understanding of global economic impact post COVID-19 by utilizing tools on Google Cloud Platform.
- Integrated Looker Studio to visualize result of data analysis.

Final Year Project: Cardiac Rehabilitation Recommendation Prediction (Python)

- Developed machine learning models to predict cardiac rehab recommendation by using seven different algorithms integrated with features selected through feature selection techniques.
- The model performance in this study achieved high accuracy at 0.951 and has exceeded the performance of previous similar studies

ACHIEVEMENT

1. Deans Awards of Matriculation Sem 1
2. Bronze Medal for Schoolwide Enrichment Module (SEM) Science Project, TYPE III (Descriptive Category)
3. Yayasan Tun Taib Scholarship Holder
